Amstrad's new micro: We bring you the facts

Computers or games players?

Parents buy computers to give their children a head start in life — but most of them end up as games playing machines.

This is the sobering conclusion in a report based on a survey of more than 2,000 people about their knowledge of, and attitudes to, home computers.

It predicts that another one million home computers will be sold between now and November.

The study was drawn up by Marketing Direction, in conjunction with Gallup. Graham Tillotson, managing director of Marketing Direction, said: "We have found time and time again that
Continued on page 6

Black box hits pirates

Buyers of a new Dragon game will also find inside a black box about the size of a matchbox. It is a "software key", designed to halt piracy.

It is a test exercise by Microdeal, the Cornwall-based software house, and the game, Buzzard Bait, is due in the shops in 10 days, along with another 40 Microdeal titles.

Managing director John Symes said the box, containing unmarked chips, plugged into the Dragon's joystick port and de-encrypted the game.

He said: "It will cut out 99.9 per cent of piracy."

Buzzard Bait's author, Steve Back, was sent an encrypted copy and asked to decode it. Mr Symes said: "He spent three days on it and then told us: 'Forget it.'"

Mr Symes said Northern Software Consultants had been working on the key since August and the design costs ran into five figures.

Microdeal's games usually cost about £8, but Buzzard Bait will be priced at £9.95. Even then, said Mr Symes, Microdeal was losing money compared with its other products.

He said: "The industry will die without something like this. Only the other day we had a

After success with hi-fi equipment, Amstrad has launched a range of competitively-priced home computers.

Paul Liptrot brings you the first full report

The Amstrad CPC 464 home computer

Amstrad's new micros: all the details

Four chain stores have agreed to take 200,000 of Amstrad's new all-in-one home computer — the whole production for this year — and they will be on sale in eight weeks.

Amstrad, best known for hi-fi, developed the four-model range in just 11 months, said chairman Alan Sugar, who made the decision after visiting a U.S. consumer electronics show.

All the new computers have a green screen or colour monitor, 64K of RAM, 32K of ROM, a Z80A processor running at 4MHz, 74 typewriter-style keys — including numeric keypad — and built-in cassette player or 3in Hitachi-style disc drive.

Price details:

System 1 with built-in cassette player and green monitor **£229**

System 2 with built-in cassette player and colour monitor **£329**

System 3 with disc drive and green monitor **£429**

System 4 with disc drive and colour monitor **£529**

Mr Sugar said the first 5,000 of the cassette player models would be delivered to Rumbelows, Comet, Dixons and Boots in the first week of June and production would rise to 50,000 a month, totalling 600,000 next year.

Fifty software packages would be available at launch, branded with the Amsoft name and written by both in-house programmers and well-known UK software houses.

Mr Sugar, whose company's name comes from Alan Michael Sugar Trading, said the concept of the CPC 464 range was similar to Amstrad's tower hi-fi systems which eliminated separate units with spaghetti-like wiring at the back. Now computer users would not have to find a compatible cassette recorder or use the family TV.

Amstrad faced a crisis earlier, said Mr Sugar, when there was a staff problem and a new team was recruited from Ambit International and Locomotive Software. At that stage the casing had been designed, but pen was first put to paper on the electronics in August 1983.

He said: "It is quite heart-warming that this is still possible in the UK."

The launch, held in the Great Hall of Westminster School, featured men

called Shakespeare and Einstein and three children named Ravel, Archimedes and Monet who demonstrated the computers.

Several Japanese computer makers are launching models here this year, all using the MSX standard, designed to ensure software is compatible between computers. Asked about this, Mr Sugar said: "In my opinion the Japanese are not going to get a look in. It's what the computer can do that's important — and the support and software — not the operating system."

He contrasted the success of Sinclair, Acorn's BBC micro and US computers with those from Japan.

And he said of his own range: "We are quite happy to stand head-to-head with them."

William Poel, chairman of Amsoft, said 48K of the 64K of RAM was useable by the industry standard BASIC, which also featured interrupt handling and extensions for graphics and sound. A version of HiSoft's Pascal was available, along with an assembler/disassembler and machine code monitor.

Peripherals would include a pair of joysticks, module for additional ROMs and a modulator to allow the use of televisions instead of Amstrad's monitors.

The CPC 464 has three display

modes, using colours selected from a palette of 27 (including black):

mode	No. of INKs	Vert. pixels	Horiz. pixels	chars
normal	4	200	320	40 x 25
high res	2	200	640	80 x 25
multi-col	16	200	160	20 x 25

Colour: the screen border can be set to any pair of colours regardless of mode and can be steady or flashing, with user-definable repeat rates. Each screen INK can be set in the same way

Windows: up to eight text windows and a graphics window can be used

Sound: the CPC464 uses a sound generator from General Instruments' AY8910 family. It gives three voices (channels), each of which can be independently set for tone and amplitude. White noise (i.e. for explosions) can be added. The three channels appear as left, right and centre — using the stereo extension jack and the computer's internal speaker produces a mixed mono output of seven octaves.

Input/output: edge connector for expansion and Centronics type printer, nine-pin joystick socket, six-pin socket for RGB etc, 3.5mm socket for stereo sound output, 5mm socket for power supply.

Cassette recorder is software switchable between 1K and 2K baud.

Keyboard unit is matt black with the alphanumeric keys — up to 32 user-definable — in black and others in blue (ENTER) and red and the numeric keypad on the right is below the cursor keys. The unit measures 580mm wide, 70mm high and 170mm deep and weighs 2.4kg.

Systems 3 and 4 in the range will have CP/M, the industry-standard operating system for business computers, and Logo, the educational language, built in, as well as a single 3in disc drive, claimed to hold about 150K on single-sided discs.

Monitors: both the green screen model (GT 64) and the colour model (640) contain the computer's power supply.

The keyboard unit and monitors are made in Korea, the joystick in Taiwan and power supply/modulator is made in the UK.

Game players?

From front page

middle-class parents are the kind of people most likely to buy home computers.

"They tend to buy them because they believe that it will give their children an advantage in life.

"But we also know that what actually happens is that the child — usually a boy — ends up using it solely for playing games.

"So much for the £125, £199 or even £399 investment in the child's future."

Mr Tillotson said the most important sources of information for potential buyers were people who already own micros.

He said: "For the first time, we have a large installed base of home computers in this country.

"When next Christmas rolls around and new purchasers ask the people next door whether it was worth buying a computer for the kids, I wonder what the answer will be.

"If the answer is 'no' then I sense the writing may be on the wall for home computers."

The survey also showed that only half of the people questioned could name a single home computer brand, despite an estimated £37m spent last year by the makers on advertising.

Sinclair and Commodore were, as expected, at the top with BBC, Atari and Apple next. Brands like Lynx and Oric were virtually unknown.

When prompted, Atari's name shot ahead of Sinclair's in people's minds. The theory is that, although the company spent relatively little on advertising, it is well known for its games players.

Mr Tillotson said: "There is still a tremendous ignorance about home computers.

"Spontaneous awareness of brands is low, brand images have barely formed and people's awareness and knowledge of even quite commonly used jargon is at a low level."

Respondents were shown a list of 18 terms, like "micro", "software" and "user-friendly". The highest awareness figure for any of them was 55 per cent, and that was the percentage of those who knew the word "micro".

Mr Tillotson said: "We didn't do anything clever in this part of the survey, like asking people to define the words they claimed to know — if they said they understood the meaning of

the word, we assumed that they were being honest.

"If, in fact, some of them weren't telling the whole truth, then the level of understanding out there is much worse than the figures show."

Last year 1.7m computers — total cost £300m were sold at an average price of £170.

Marketing Direction's study is called the GB Market for Home Computers, General Attitude Study, which is carried out each year. The company also has a more frequent study called the Personal Computer and Video Games Users Survey. *Marketing Direction, 6 High Street, Thames Ditton, Surrey KT7 0RY*

Black Box

From front page

letter from a boy who said he was paying a pound to a group for copies of games."

Microdeal had placed an initial order of 25,000 of the keys and a patent had been applied for.

Mr Symes said: "We will make it available on our future releases. We will then, hopefully, be ordering more and hope to bring the price down."

It would also be offered to other software companies. And Mr Symes said it would be priced to them at a figure which would recoup Microdeal's investment only.

He said: "After all, while people are playing other companies' ripped off games they are not buying ours."

And he said that Buzzard Bait had been chosen for the test because it was the best of the 41 being released. The others, which include a small number of conversions, are for the Commodore 64, Atari, Dragon, Aquarius, Spectrum, Oric, Electron, BBC, Tandy Colour and VIC-20.

Mr Symes said that eventually he wanted the software key available for all popular computers, if the demand was there. As it used the joystick port, it would only work on some if they had a joystick interface.

He explained that the key, packed with the cassette in a video-style case, had several routines, each of which cross-checked with another before running the game. A differently programmed key was needed for each game.

Even if a user managed to stop the game and list it, all he would see would be meaningless garbage, said Mr Symes.

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Why settle for BASIC?

Having used BASIC, Pascal, Forth, Logo and various other languages, we fail to see why people settle for BASIC, which we feel is one of the most complicated.

Pascal and Forth, for example, are much easier to use because of proper programming structures which remove the need for complicated jumping. It is much easier to understand WHILE hungry, EAT than 10 IF hungry THEN eat: GOTO 10 — or at least we think so.

One version of BASIC which comes very close to being structured is BBC BASIC. However, it totally misses the point. What is the point in having procedures, functions and constructs like FOR... NEXT and REPEAT UNTIL when one still has to jump over a procedure (with GOTO) to stop it being inadvertently executed? Also the commands GOTO and GOSUB — the definite sins of structured programming — are in the language when they should really be redundant.

Normally there is no provision in BASIC for named procedures or subroutines, so programs begin to get totally unreadable when there are jumps and subroutine calls to line numbers.

And BASIC has no data type declaration facilities like Pascal and Forth. Programs tend to use variables of a very limited type. Admittedly, some BASIC variants can predefine variables to be string, real, integer or double precision. But with most popular home computers, such as the Atari, Commodore 64, VIC-20, Spectrum and BBC, this is impossible.

For most tasks integer arithmetic will suffice, and is usually much faster than real arithmetic. But the BBC requires a per cent sign after variables to denote integers, so making programs even more unreadable, with these per cent signs scattered all over the place. The Spectrum doesn't even have integer variables!

*Another thing that adds to unreadability is the use of numbers to represent commands, as in *FX, VDU, PLOT and ENVELOPE on the BBC and the confusing use of POKE to control the graphics on unexpanded Commodore computers. What is wrong with simple English commands?*

For Acorn to encourage the use of BBC BASIC in schools is totally naive. It is senseless to promote a language which is both BASIC and non-standard. Why not teach Logo or Pascal instead? What is this fascination with BASIC? Why don't people see the light?

We own Epson HX-20s and Jupiter Aces and for the Ace we have Pascal, Forth and the excellent assembler from Transam. To be honest, we have hardly used BASIC for months.

Our suggestion to you is to think very carefully about buying a decent language for whatever computer you own. It really is easy to use proper languages provided you have an open mind.

A. Hegedus and D. Sutton
East Sheen, London SW14

COMPETITION

Must be won: 200 prizes of Outback, a new game from

PARAMOUNT SOFTWARE

Baby kargaroos are under threat from cunning swagmen in Outback, Paramount's new game for the VIC-20 and Commodore 64.

In-house author Jason Benhams puts you in charge of the Boss Roo who has to defend the outback.

You can win a copy of Outback. We've got 200 to give away — 100 each for the VIC-20 and Commodore 64 — to winners of our spot the difference competition.

According to Bob Horsham, Paramount's marketing director, a team effort is needed for top quality software. To aid this, the company is altering its headquarters to create a building equipped for film visuals, graphic design and research.

Outback costs £7.50 for the Commodore 64 and £5.50 for any VIC-20 — which means that the total prize value is £1,300.

Paramount, of 67 Bishopton Lane, Stockton on Tees, Cleveland TS18 1PU, also has Megawarz for the Commodore 64 (£7.50), Jogger (VIC-20, £5.50), Chocabloc (VIC plus 8K/16K, £6.50), Countdown (VIC plus 8K/16K, £5.50) and Castle of Doom and Sporting Decathlon (both £6.50 for the Dragon 32).

How to enter

Study the two cartoons and try to find all the differences. Mark the differences on cartoon B by circling them with a ballpoint pen and then fill in your name, full address, the number of differences you found and your computer. Please write clearly — if you are a winner, the coupon will be used as a label.

Seal the marked drawing and the coupon in an envelope and write clearly on the back of the envelope the number of differences you found and your computer: VIC-20 or Commodore 64. Do not enclose anything else.

Post your entry to Paramount Software Competition, Home Computing Weekly, No. Golden Square, London W1R 3AB.

Entries close at first post on Friday, May 4.

You may enter as many times as you wish, but all entries must be on the official coupon and cartoon; copies will not be accepted.

The winners will be the first 100 correct entries from VIC-20 owners of the Commodore 64 opened at random.

Important: please follow these guidelines carefully. Incomplete entries cannot be accepted.

The rules

Entries close at first post on Friday, May 4 1984 and the guidelines in the How to enter section form part of the rules. Entries will not be accepted from employees of Argus Specialist Publications, Paramount Software and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

Chocky Egg by Dave Carlos and Jon Revis

Which came first, the chicken or the chocolate egg? This is a question which has puzzled scholars for centuries now.

The well known Cadbury group believe it was the chocolate egg while any farmer will claim the chicken was first. This program tries to solve the deadlock by making it quite plain that it was of course the worm which came first. For without worms there are no chickens to lay eggs and no eggs to become chickens.

The aim of this program is to see how many worms you can peck before you run out of chickens in the coop. If you manage to peck five worms from the 10 that come to the surface each day then you get to lay your chocolate egg and upon its hatching get another life.

Unfortunately the chicken you command is low down in the

Easter special Peck the worms and save your planet

So if the wiggly worm does stray towards the rocks our advice is to keep your chicken well clear!

Control is by pressing Z to move left and X to move right. If you wish to peck then press return. The way to eat worms is to get right over them and then peck just as they get to the surface.

If you are not right on the worm or don't peck at just the right time then you will have lost your chance with that worm.

The sensitivity of both the worm to the rocks and the chicken's pecking can be adjusted. To do so you must alter the value being tested on line 1580 and line 2130, i.e. the value after the equals sign. To make them less sensitive decrease the value, for more sensitivity increase it.

For the most difficult game make the value on line 1580 = 64 and the value on line 2130 = 8. They should always be in multiples of eight though, due to the MODE 2 screen.

The program is in two parts to save memory and so that it will work on BBC disc drives.

Variables

Integer:
 co% multi purpose counter
 c% colour code
 col% colour selected at random
 col2% different colour from col%
 flag% used with modulus to decide which worm to print
 fl% test for user input
 flr% rock flag = -1 if a rock hit, otherwise = 0
 lives% number of lives left
 ox%, owx% old X co-ordinates of chicken, worm
 owy% old Y co-ordinate of worm
 rm% right hand margin beyond which chicken and worm cannot move
 ro% number of rocks
 sc%, tsc% total score, this life's score
 wx%, wy% worm X, Y co-ordinates
 wg% worms left to travel up
 x%, y%, z% used to read DATA for plotting
 Read:
 m,u used in circle drawing
 t time counter used in delay loops
 String:
 a\$ multi-purpose string
 egg\$ egg
 hen2\$, hen1\$ pecking hen, standing hen
 rock\$ rocks
 t\$ title
 wipe\$ used to erase hen

pecking order so not only does she have to peck for herself but must also suffer the harassment of being constantly henpecked by the top chick too. This disturbs the concentration and leads to a momentary hesitation.

The final hazards to our modern-day chicken are the buried radioactive rocks which do rather strange things to worms. Any worm passing too close to such a rock is immediately turned into a rather nasty radiation beam which, yes you guessed it, kills chickens.

Listing 1 sets all the user-defined characters and the sound envelopes which are then put to use in Listing 2. This is a good technique for saving memory on the BBC machine.

We have also put spaces into the listing after every BBC word. These are not strictly necessary and can be left out if you wish. They are there for clarity only (this also applies to the REMs).

The program has been tested on the BBC Model B and Electron micros. On the Electron the progress is rather slow but the game is actually no easier. If the BBC has discs then you should include the line in listing 1 which sets PAGE to &1200.

The program has few REMarks in order to save memory and to make things as fast as possible but the PROCEDURE names are supposed to be self explanatory and should help you to see what is happening.

The use of strings to change both graphics colours and to move around the screen is a little unusual. They were used to make it easy to print the multi-coloured characters, some of which need 10 actual characters to be printed. This technique can save a lot of memory if used wisely.

You will also search in vain for the program title. It is held

co-ordinate values will give a fairly small answer. We are not really interested in whether the direction is left or right so the ABS function converts this to a positive value.

There are two initialisation routines setting variables, one for the whole program (init1)

(worm\$(0) and worm\$(1)) we can print either from a single line of BASIC. Then by only allowing f1% to have values of 0 and 1 (which is what the MOD 2 does) we print first one then the other worm in rotation. This gives us the wiggle if we define two opposite worms to put in the array.

in ASCII codes and READ into the t\$. Greatest care needs to be taken over typing the DATA lines. A single mistake here can be very hard to find and can have highly unpredictable results.

The use of an absolute value (ABS) to test the proximity of the chicken, and of the rocks, to the worm is also a little unusual. The technique is based on the idea that if they are close together then subtracting the x

and one which resets everything before each new life or sheet (init2).

The function FNrock tests to see if the worm is close to one of them. If it is then the value -1 (true on a BBC) is returned, if not then 0 is returned and the program continues accordingly.

The other interesting thing about the worm is its wiggle. By putting the worms into an array

How it works PROCedures

- 210 background prints all the background features before each sheet
- 390 lines draws planks on hen house
- 490 sun plots sun and rays
- 620 lives prints number of chickens left in henhouse
- 690 title (X%,Y%) prints coloured title in x,y position specified
- 800 cluck makes clucking noises and printing
- 920 plot (N%) reads data statements for various plotting and colour changes required
- 1000 walkhen moves hen in desired direction
- 1080 input gets key inputs from user
- 1160 strings defines various character strings from DATA statements
- 1280 read (Z%) used by PROCstrings to READ DATA
- 1430 moveworm moves worm and decides which worm to print
- 1620 shoot tries to shoot hen if worm touches a rock
- 1740 delay(t) delays for 't' seconds
- 1780 reset resets worm to bottom of the screen
- 1830 printrocks prints rocks
- 1900 dead explodes chicken if hit
- 2030 peck makes chicken peck ground
- 2110 food checks to see if worm is close enough to chicken and if it is pecking at time
- 2190 scores prints various scores
- 2250 init1 first initialisation for whole game
- 2290 init2 initialisation for each life
- 2330 egg prints egg and congratulations message if given a new life
- 2520 end finishes game and offers another go
- 1550 FNrock checks to see if worm has hit rock

Alien Fallout by Shingo Sugiura

You are the sole defender of the planet Gorgon. All the others in your position have been wiped out in previous attacks by the aliens. How long can you protect your people?

Type in Listing 3 and SAVE it under the name ALIEN and then type in Listing 4 and SAVE it under the name FALLOUT just after ALIEN.

If your system is tape based it is vitally important that you SAVE FALLOUT before you run it as it will over-write itself and you'll have to type it in all over again!

How it works Alien

10-40 REM statements
50 call a PROCEDURE which defines characters and envelopes
60 select MODE7
70 print title page
80 CHAIN in main program
100-220 PROCEDURE to print the title page
310-520 define characters

However, once you have typed it all in — and provided it's correctly entered — the first program will automatically reset PAGE to the appropriate value and CHAIN in the second program.

When the main program is loaded a brief set of instructions will appear and it will wait for you to press the space bar.

Then the screen will clear and you will see the aliens at the top with your tiny ship at the bottom of the screen.

Press Z, X and shift to move left, right and fire respectively. You must prevent them from reaching the surface for as long as you can.

Variables

death number of dead aliens
landed boolean to indicate your death
fired boolean to indicate whether there's a missile on the screen or not
x% X co-ordinate of your ship
al%(X) array of holding the position of the aliens
bx% X co-ordinate of missile
by% Y co-ordinate of missile
score% current score
sc(X) array of scores

When your spacecraft is destroyed and your score is in the top eight you will be asked to enter your name and the hall of fame will be displayed.

The sound can be switched off or on at any time during the game by pressing Q or S.

Note: When you type in the program it is essential to enter the £ sign, in line 1280, as a hash symbol. This is brought about by the fact that the ASCII code for hash on the BBC corresponds to the code for £ on the printer.

Hints on conversion

I have not used many BBC specific commands so conversion should not prove too difficult. However, here are some hints:

- Replace all PROCxxx with GOSUBSs
- Replace all REPEAT UNTIL loop with GOTOS
- The short machine code routine is a simple routine which returns the code of the character at the current cursor position
- *FX210,1 switches off all sounds
- *FX210 switches them back on
- The screen format is 20 x 32 and allows 16 colours

NAME TOTAL ENCLOSED £

ADDRESS.....

Jogging/ Sidewinder Sord M5 £8.95

Computer Games, Goldings Hill,
Loughton, Essex IG10 2RR

In the first game you control John, who goes jogging every morning. He wants to win the big race next week. A rival, however, is trying to interfere. He digs holes in the road, drops apples in his path, and uncages a very unfriendly crow.

You will be pleasantly surprised when you run this game. John is a brightly coloured, well-defined character and as he waves his arms and legs, background scrolls to give the impression of movement. You can make him run, stop and, somehow, go up and down!

In Sidewinder, half of the screen is the sky and bottom half is the instrument panel. The sky has dozens of dots — enemy helicopters, jet planes, prop planes. You have to destroy as many of them as you can using your sidewinder missiles before your fuel runs out. Of course, before this happens you must land.

Although both these are written in BASIC, they feature good graphics and sound. They're obviously not as sophisticated as cartridge games, but represent good value for money.

Ghouls 32K BBC £7.95

Micro Power, 8/8a Regent St,
Chapel Allerton, Leeds LS7 4PE

Another high standard Program Power game. Cassette presentation is very good and instructions are quite adequate. As the game loads we can hear spooky music

and the screen display changes colour, making the long loading much more interesting.

Starting at the bottom, the idea is to reach the top and enter the next room of the creepy mansion. During your trip you have to eat titbits to gain extra points, avoid poison-smearing spikes and bouncing spiders. Your journey is made more difficult by moving platforms,

Jet Power Jack 32K BBC £7.95

Micro Power, 8/8a Regent St,
Chapel Allerton, Leeds LS7 4PE

Jack has been captured by the evil warlord Nogrob. You have to collect fuel pods from one side of the garage and return to the other side to refuel the waiting starship. Just to add excitement, Jack has to avoid nasty space Googjies and finally, yes, you've guessed, prepare yourself, it's... Wilfred the hideous Yugg monster. To add to this impossible task, the sides of each ledge are live. Touching them will cause Jack to plummet to his death.

Is this game difficult? You're not kidding. After plenty of practice I finally got the hang of moving Jack around. Now, I'm

starting to play the game. If you like challenges you'll like this. Presentation is of the high standard we have come to expect from Program Power. However, you must prepare yourself for the pictures of the terrible alien creatures, such as Wilfred.

This game takes a lot of getting used to, but it's worth the trouble. Possibly not very original, I think new ideas are getting few and far between. Still, I'm not trying to put anyone off.

3-D Stalkers TI-99/4A £5

Stainless, 10 Alstone Rd, Stockport,
Cheshire

An interesting tactical game which requires two players. You are both trapped in a symmetrical maze from which only one of you may escape. The object is to pursue and kill your opponent before he finds and eliminates you.

The screen shows an overhead view of the maze and 3D perspectives of what is directly ahead of each player, updated after each move. Your position in the maze is not shown, but may be displayed at any time if requested. Obviously this option should not be used arbitrarily. Confirmation of your whereabouts is not only critical to you, but of certain interest to your opponent.

The length and difficulty of each game is determined by the number of shots that are required to kill your opponent, requested before each game starts. Movement, controlled by keyboard or joystick, is forward, or turn back, left or right.

Not the sort of game I find particularly addictive, but at least it does make a change to pitch your wits against an equally fallable human opponent \$ and who knows, will you be the hunter or the hunted?

instructions	90%
playability	60%
graphics	50%
value for money	85%

Raging River/ Super Jackpot TI-99/4A £6

Pete Williams, from Stainless, 10
Alstone Rd, Stockport, Cheshire

The first is actually called The Raging Amazon, and one wonders why the author gave it two titles. It is of the ski-run type: you must glide your canoe through a vertically-moving

panorama. Graphics are very good, and good use has been made of colour. Hazards include fallen trees lying half-submerged, rocks and man-eating alligators (who also have a penchant for canoes it seems). You can speed up or slow down the movement by controlling the rate at which the panorama moves past you. There are occasionally delays while a melody is played — at the beginning and whenever you fall

foul of a hazard. The cassette label claims that you should aim to travel 82 miles — it can be done, it says — but I found that frequently the river was blocked completely by more than one hazard and it was quite an effort to travel just a few miles. The second is yet another in the fruit machine mould and, although the graphics are excellent and every effort has been made to overcome the slowness of TI BASIC, in the end it is just as

boring as all the others on the market.

instructions	80%
playability	75%
graphics	90%
value for money	65%

Game for some fun?

New games for the BBC, Sord M5 and TI-99/4A are given the once-over by our review panel

contracting floorboards and powerful springs. If you think that sounds easy, there's a time limit and, if you fail to reach the top, you shrivel up into a little pile.

Graphics are very good indeed. The slightest things have been thought of. When you die, the ghost who chases you around the screen smiles. Four levels have to be accomplished before you gain an extra life. The first three are deadly, but the

fourth... who knows?

Addictive and exciting. An interesting feature is that when you lose a life the screen moves away sideways and reappears in a spin to the centre.

The First Major Software House to introduce programs for the Memotech 500/512

IN YOUR SHOPS FROM 21st APRIL

PSS LAUNCH MEMOTECH SOFTWARE

MAXIMA is certain to become a best seller for the Memotech. It is a graphically superb game that has you zapping 16 different varieties of aliens, each with its own formation and attacking patterns.

The game opens with your ship executing an impressive jump through hyper-space to where the action is. First up are the green snappers - easy targets against the starry backdrop. Next comes the blue meanies, a swirling bunch of wriggling invaders. To follow, a crescent of rather beautiful revolving hexagonal barrels who arc around the screen raining bombs on you. Its a shame to pot these lovely creatures. On you go to a further 13 screens of magnificent graphics.

Devestatingly simple in concept it nevertheless has that indefinable ability to compel you to have just one more attempt to try and see what the 16 screens hold in store.

A must for all Memotech owners.

Stonkers: soldiers need to eat

I am writing because I am afraid Spectrum owners may be wrongly put off by the review of *Imagine's Stonkers* (HCW 50) by D.C. I'm aware that your reviews are only a personal view of programs but I feel I must correct some of the criticisms made.

Firstly, the alleged "black marketeering" by the supply units: this occurs because the supply trucks follow the exact route indicated by your cursor and should it meet one of your combat units along the line it will supply them, whether or not it was what you actually intended. Therefore the answer to supplying a particular unit is to make sure your truck will meet no other combat units before it reaches the correct one.

Secondly, the reason his infantry were dying miles from the enemy was probably because he forgot to keep them properly supplied with food from his supply ship — computerised soldiers have to eat as well, you know!

As for the tendency to crash during play *Imagine* has admitted this is a bug and offer to replace any faulty copies with corrected, later editions.

Howard Davies, Stoke, Coventry.

Two notes from us

● Pan Books has asked us to point out that, as mentioned in a footnote to a letter in HCW 53, its offer to replace books with faulty listings applies only to two titles, one for the VIC-20 and the other for the Commodore 64. The remainder of the series, for other computers, does not contain the errors.

For those who may not have seen the footnote, Pan is offering a free copy of the reprint if you send a proof of purchase — like the title page — to Pan Books, 18-20 Cavaye Place, London EC4A 1AB. Pan says the reprints will be despatched soon.

● Due to a typographical error, we printed an incorrect extract from Ellis Horwood's book, *Winning Games on the VIC-20*.

This is the correct version:

If you have a 16K RAM pack, the following commands entered in direct mode immediately after power up will set up the VIC to RUN a program designed for a VIC or a VIC plus 3K:

```
POKE8192,0:POKE44,32:
NEW
POKE36866,150:POKE
36869,240:POKE648,30
```

Clear the screen and you are almost ready to go, only one last hurdle remains. The program which you want to run may have a line like this in it:

```
POKE56,28:POKE52,28:
CLR
```

This line is used to lower the top of memory to protect some area of RAM from being overwritten.

With a 16K RAM pack, if you have used the above POKES, you don't need to lower the top of memory — so delete the line from the program. Otherwise you will get an OUT OF MEMORY error as soon as you try to RUN.

Home Computing Weekly

High prices down under

I decided to write to you after seeing the One Man's View in HCW 38 from a software house which is having trouble with distributors.

I am having similar problems out here. My wife and I started a small mail order software business, selling mainly through user group magazines.

We started it because when we purchased our Atari 400 we were amazed at the difference in the price of software in the U.K. and out here. It's not so much the programs by Atari — they are about the same prices — but third party software and programs for the Spectrum, BBC, Commodore 64 and VIC-20.

A few examples: The Hobbit, for the Spectrum, BBC and CBM 64, is £14.95 in the U.K. and here the price is A\$39.95. plus A\$2.50 postage, which is equivalent to £28.12. Mad Martha, for the Spectrum, is £6.95 in the U.K. and the equivalent of £21.50 here. As you can see, quite a difference in prices.

By the way, the 48K Spectrum sells here for \$399 — that's \$264 — the BBC model B is \$1,650 (U.K. £1,093). If you write to

Sinclair U.K. you are told to buy through the distributors out here.

I know that these firms have overheads and have to honour warranties and so forth, but as import duty and sales tax total 30.2 per cent on the wholesale price it still seems wrong to me.

The stupid part about all this is that most state education departments recommend the BBC for schools, so there is a ready made user base. But at those prices the kids' parents will probably settle for some cheap and nasty machine. The same applies to software — if the price was reasonable they could buy more.

Which brings me back to my problem. I wrote to a few of the software houses in the U.K. about supplies. Only a couple bothered to reply. The main gist was that they were already, or were about to, supply such-and-such a distributor in Australia, thank you very much!

At one stage I was buying direct from the U.K. at the price as advertised in your magazine, paying 30.2 per cent import duty and sales tax here, and still selling cheaper and making a few dollars.

I would appreciate it if you could print this letter in your magazine and, if any software house with programs for Atari 400/800, BBC, Spectrum or CBM 64 would like to contact me maybe we could do business.

At this stage I look after the mail order side of things at night as I work in an aluminium smelter during the day. We don't want to become millionaires overnight (too many hassles), just to give people a good deal and make a bit of profit.

M.C. Adams, Elspedito Software, Frankford Highway, Glengarry 7251, Tasmania, Australia

Pray to escape

I'm replying to Mr M. Logan (HCW 53) who had a few problems with The Castle, the excellent game from Bug-Byte. His problems were getting out of the maze and getting by the werewolf.

Both problems are relatively simple to solve. The simplest way to get out of the maze is to enter PRAY. This transports you out of the maze and into the room containing the

hovering buzzards and the chasm.

Secondly, to get past the werewolf enter SHOW CROSS. This scares the werewolf and allows you to enter any direction except west. The werewolf is of the vampire family and crosses scare off vampires. It's obvious!

Another clue to the game is SMHA CLYF. And if you want to know your score at any time type SCO.

I hope these hints help Mr Logan and other people.

M. Lewis, Mansfield, Notts

Say who you are

I advertised some software in the classified section of HCW 51 and was most pleased with the response.

Unfortunately, in his/her eagerness to snap up the bargain of a lifetime someone sent a postal order and no return address or even a name. Under the circumstances, there is little I can do except await an irate letter.

Perhaps you could publish this letter as a warning to any prospective purchasers of mail order items. And it may explain why one of your readers is still waiting for a tape.

Mark Griffiths, 8 Moss Close, Warks CV22 6SD

Revised flight plan

Since your five star review of *Battle Flight*, for the Oric, in HCW 45 we have taken your criticisms to heart and have tried to do something about them.

The package now comes with three sheets of instructions containing illustrations, with some of the pilot jargon removed. The "two crosses" representation of the aircraft has been replaced by user defined aircraft character graphics, as suggested by your reviewer, and the instrumentation display has been made more self explanatory.

In addition the take-off and touch-down sequence has been redesigned to give an even better flying atmosphere and also makes for easier landings (we hope). We have retained the "old control layout" for reasons described in the instructions and because we believe if used as described control soon becomes quite easy without the need to

take one's eyes away from the screen.

Finally we would endorse M.R.'s statement in the review, that the program is "... too complicated for younger children." We make no apology for this since the program was specifically aimed at the more mature aviation enthusiast with maybe a little knowledge of what real flying is all about.

J.J. Braithwaite, Stour Computing, 16 Old Bridge Road, Bournemouth BH6 5RG

Oric praise

Thank you for publishing my recent letter regarding the problems with my Oric. I have since been contacted by Oric and they have very kindly sent me a new Oric Atmos computer.

Through your pages I would like to express my gratitude to Oric's managing director, Mr Peter Harding, and especially his assistant, Miss M. Bell, who arranged for the Oric to be exchanged and has restored my faith in Oric Products International.

Bill Bailey, Hatfield, Herts

Move ladder

Having typed in *Climber*, by Alan Jarvis (HCW 51), we found that on screen five you could only get two flags. This is because of a misplaced ladder. To rectify this line 3005 must be changed to:

```
3005 DATA 10, 11, 4, 4, 4,
13, 3, 12, 13, 3, 8, 19, 3,
4, 2, 7, 8, 21, 3, 4, 23, 7,
5, 30, 14, 4, 11, 5,
```

We think that *Climber* is the best game you have published for the Spectrum. Anthony and Michael Ventre, St Helens, Merseyside

Send your letters to Letters, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. Don't forget to name your computer — the best letter could win £5-worth of software. Got a problem with your micro? We'll soon be starting a queries page, so send your technical questions to Queries at the above address.

COUNTDOWN

Time is important. Accuracy essential. Courage mandatory. But, above all, Nerve is the prime attribute needed for your mission as an agent in the crack S.M.U. A Superb Arcade / Graphical Adventure. VIC 20 8K or 16K Expansion. Keyboard or Joystick.

£5.50

OUTBACK

".....an addictive game...the Graphics are very good indeed ...there's also a lot of very good programming." Personal Computer News, Dec22-Jan 4 1984.

Can you use the very sophisticated defence set up to beat off the cunning Swagmen ?

Pure Machine Code Action. Fully Featured. Superb colour and Graphics.

A game with a difference.

Any VIC20 Joystick. COMMODORE 64 Keyboard or Joystick.

£5.50 & £7.50

CHOCABLOC

A fast moving, pure Machine Code action game, with Chocabloc our hero trying to sort out some Real Cool Choc Bars — until everything goes crazy and the action is on!

Arcade standard. Fully Featured. Excellent sound and graphics.

VIC 20 8K or 16K expansion.

Keyboard or Joystick.

£6.50

MEGAWARZ

Where does your fantasy go when your mind leaves your body ?

Megawarz will take you there you can be sure. High resolution, multi-colour graphics. Sprite graphics. Synthysound. Pure Machine Code action.

Arcade Standard. A magical planetary trip.

COMMODORE 64 Keyboard or Joystick.

£7.50

JOGGER

Truly a jogger amongst joggers. If you have trotted with the rest, now run with the best.

Machine Code action. Superlative sound. Creative Colour.

A quality programme from Paramount.

Any VIC 20. Joystick.

£5.50

Active Computer Learning 48K Spectrum £7.95

ACL Division, Express Marketing, 73 Watery Lane, Bordesley, Birmingham

A program with a difference. It's interactive and sets out to teach you about the computer, its uses and its future, with tests at the end of each of 11 section. At the back of the manual is a course test record sheet for the codes and scores that appear at the end of the exercises to send off to ACL. A certificate will be sent, framed if £4.99 is enclosed!

Will this program be more successful than a book? I feel it could have made better use of the graphics and sound facilities that a 48K Spectrum offers, and not

relied upon putting information across by using masses of words printed on screen using ordinary Sinclair type.

With the many aids now available to programmers larger type, fewer words and more diagrams are possible. The offered game of Space Invaders gives no chance for a second go, and answers are not put into blanks in exercises.

And why must programmers imagine that educational programs need correct answers entered before the next question can be asked? I liked the basic idea and use of the space bar to move to the next screen. **T.W.**

Lasermaths 32K BBC £7.50

LVL, Electron House, Bridge St, Sandiacre, Nottingham

Alien spacecraft are invading your planet against your defence of three laser weapons. The lasers can only be charged by answering mathematical

problems correctly. Ten consecutive correct answers charge a laser sufficiently to enable an alien craft to be destroyed. Get one wrong, or take too long to answer, and you lose a laser.

The Mode 7 Teletext display is neat and well presented, but I think the battle scene could be a little more imaginative. The use of sound as the laser is charging

How much will they learn?

Our team of examiners marks the report cards of new software designed to teach

would also add a little more excitement for the six to 16 year old to whom the program is aimed.

The options make this an extremely versatile program. There are 56 selectable grades with various combinations of addition, subtraction, multiplication and division. Positive and negative numbers, the time allowed for answers, the largest number to be dealt with and the number of parts in the questions

can also be selected. Difficulty level can be constant or increasing.

Instructions are excellent. For kids who have to suffer computer maths there should at least be some enjoyment in this approach. **D.H.**

Geography Dragon 32 £8.75

Cable, PSL Marketing, 52 Limbury Rd, Luton LU3 2PL

This an educational program according to its producers and the subject is Geography. I would beg to differ. This is a database program with a few features which enable questions to be asked based on its contents.

One of the well publicised features is the high resolution World Map which is quite nicely done but contains no real detail in terms of country boundaries and only very large features are labelled. There are other maps, but all are in low resolution and this leads to considerable distortion of detail. The question are all multiple choice and, as is usual with computer control of

this type of question, some of the alternatives can be ridiculous. There is also the facility to check the currency and capital of each country in the database but the search is frustratingly slow.

The only feature I can fully recommend is the spelling check which means slight misspellings can be used and the information still found. However, to call this package Geography is like calling Genesis the Bible. It's a start but by no means worthy of the name. **D.C.**

Money Spectrum 48K £6.95

Stell, 36 Limefield Av, Whalley, Lancs BB6 9RJ

A program designed to introduce young children to coins, various combinations of coins, notes, change and so on. It's rather unfortunate the government has decided to ditch the 1/2p coin, because that's where the program starts.

All the coins are represented graphically, and someone has worked very hard to create near likenesses. But they are only near likenesses and not replicas. Whether a child will relate the screen picture to the real thing remains to be seen.

It's unlikely an unaided child would be able to read the screen

and manipulate the numbers involved in changing two fivers for a 10, or four fives for 20, let alone calculating change. As a result Mum or Dad should be standing by. This being so, they could do this with real money which would be a much better experience for the child.

To be fair, the designers have tried to make the program as simple as they can, but then, money's complicated stuff! Buy this program if you have no idea how to teach your child and some help, but do the teaching with the real thing, and lots of discussion. **D.M.**

Wordgame 32K BBC £5.45

Scientific, Old Loom House, Back Church Lane, London E1 1LS

A lot of work has gone into this. A special Character set has been designed to give better formed letters with proper ascenders and descenders. The instructions are good; controls simple and fairly

easy to use. Unfortunately, the result is a rather slow and laborious exercise.

There are four stages of question, each with five difficulty levels — though this I gathered from the printed instructions, not the program. In the first two you choose letters from those displayed to fill gaps; in the other two, you key in letters to make up a word. It has a 1,000-word vocabulary.

However sometimes the choice throws up stupid questions — e.g. choose the missing letter in m*p from a or o. It could be either! This happened enough times to become annoying. At one stage the word was "opp*sition" and there was only one letter offered. Then at stage three, it gives you one letter of a three-letter word and you guess the rest. Try "e***", with only four mistakes allowed. The

answer was "eye". That sort of question can be bl**dy difficult! **B.J.**

LANGUAGE LEARNING AIDS FOR FRENCH, GERMAN & SPANISH

Already in use in numerous schools and colleges, these programs provide an immensely powerful aid to foreign language learning. The cassettes include extensive vocabulary lists arranged as a series of lessons, each covering a different subject. A tuition control program enables individual lessons to be loaded and used as required.

Words, phrases etc are presented first in one language, then the other complete with all necessary accents and special

characters. Masculine, feminine and neuter words appear in different colours to encourage gender learning. All lessons can be run in three different ways, i.e. learning only, self-test or speed and accuracy test.

The programs are suitable for pupils of all ages as simple commands enable new lessons in vocabulary or grammar to be entered by the user. These may then be edited as required and stored on cassette for later use. Invaluable for homework and exam revision!

Level A Cassettes: Contain the tuition control program and 16 comprehensive lessons for general vocabulary learning.

Level B Cassettes: Contain the tuition control program and 16 lessons including verb lists, adjectives, adverbs and phrases.

Available from dealers, large stores or mail order.

DEMOLATOR

Following the Thousand year war with the Alien Demolators the last remnants of the human race are being transported across the galaxy in cryogenic suspension aboard the B.S. Quinn (Battle Star).

The Demolators however have invaded the cargo bay and it is your job to destroy the Demolators and to protect the human cargo. All you have to defend Humanity with is Xeno (popularly named "the Phobe") the ultimate Robot. You can control his movements on two planes and fire an ultrasonic Cannon to defend humanity with.

DEMOLATOR — BBC — MODEL 'B' 0S1-2, £6.95

(FOR A LIMITED PERIOD)

Super Darts by Mike Stranger

My 12-year old son Ian and I have produced an electronic version of darts for the 16K Spectrum. It was our first real attempt to make a program, but, if Ian's reaction and that of his friends is anything to go by, then you can take it that it's super entertainment.

It's a game for one or two players, and the starting score is a matter for the players to specify. The normal rules of darts apply, and the darts are supplied (electronically, of course) in sets of three.

To aim each dart, there is a small aiming circle at the top right-hand corner of the screen. A flashing dot can be moved by the cursor keys to the point where the player wants the dart to be aimed at.

When ready to "throw", you press zero, and a dart appears on the full-screen board, which is marked in the usual manner.

But, as nobody is a perfect darts thrower, there is no guarantee that the dart will hit the board exactly where you aimed it. How like real darts!

The score achieved by each dart is confirmed by the scoreboard, with appropriate accompanying beeps, and the total remaining reduced accordingly.

For two players, separate scoreboards are displayed to the left and right of the main board. As you would expect, anyone scoring the magic 180 with a set of three darts is rewarded by a suitably triumphant sequence of beeps!

How it works

9851-9859 set up menu
9860-9865 routine for dealing with LEFTS
9866-9892 routine for dealing with RIGHTS
9893-9906 routine for dealing with MIDS
9907 exit and return to main listing

The rules of darts specify that, to finish, a player has to reach a zero total exactly, the final throw being either a double or a bull.

Super Darts is no exception — and the scoreboard will even tell you which double you need. If you go bust (exceed the required score to reach zero, or fail to do so with a double, then the scores achieved by all the darts in that set of three will be ignored.

How does it work? The central concept is that of the aiming circle. The position of the flashing dot relative to the

How it works subroutines

- 1010 validates entered run data, sets v\$ to indicate validity or otherwise
- 1120 inserts automatic transactions
- 1500 adds a transaction
- 1800 converts numeric account to zero-filled right-aligned string
- 1900 receives main menu responses and transfers control to relevant routine
- 2100 adds a new account
- 2450 deletes an account
- 2840 receives account menu responses, transfers control to relevant routine
- 3100 adds a regular transaction
- 3700 deletes a regular transaction
- 4150 prints enquiry on regular transaction
- 4500 receives data for new transaction, stores it temporarily in b\$ and calls 1500 to add it to database
- 5000 deletes a transaction
- 5500 prints enquiry on all accounts
- 6000 prints enquiry on transactions starting from an entered date for an account
- 6100 prints enquiry on all transactions held for an account
- 7000 quite program, option to save and verify
- 9000 validates entered amount, reformats it for printing and data storage, sets v\$ to indicate validity or otherwise
- 9996 prints blanks on error line
- 9998 prints error message on error line

centre of the circle is first of all multiplied by a factor of three.

Before applying this to the full-screen board, a random variation is added to the calculations at this stage (nobody's a perfect darts player!) Then the dart is printed on the main board as a cross enclosed in circle (end-view, of course).

The position of the dart relative to the centre of the main board is now re-defined in terms of its distance from the centre and the angle from the

three o'clock position.

The angle enables the computer to decide in which scoring segment the dart is situated, and the distance enables it to decide whether it's a double, treble, outer or bull (or a miss, for that matter!)

Note: Capitals in PRINT statements should be entered in GRAPHICS mode.

Converting BASIC by R.A. Houlton

Sinclair BASIC uses a non-standard form of string slicing, as those who try to convert programs written for other computers know only too well.

This program takes the sweat, toil and tears out of conversion by allowing you to enter the form used in ordinary Microsoft BASIC and

Main Variables
t\$(9,50,43) holds transactions for all accounts. Each element consists of: **date** six characters, **debit/credit** one character, **reference** six characters, **comment** 15 characters, **amount** seven characters, **balance** seven characters, **debit/credit (bal)** one character. The first dimension is the account number and the second is the transaction number within the account
a\$(9,198) holds account information. Each element consists of: **account name** 15 characters, **number of regular transactions** one character (0-9), **number of transactions** two characters (00-49), **regular transaction block** 180 characters (9 x 20). Each element consists of: **day of month** two characters, **comment** 10 characters, **amount** seven characters, **debit/credit** one character. The first dimension is account number
d\$(6) current date
p\$(6) date of previous update
q\$(6) work date — used in regular transaction processing
v\$(1) used as a validation result indicator and to hold menu responses
w\$(7) work field
b\$(35) used to hold a transaction temporarily
accts number of accounts
m(12) number of days in each month
i,j,k,l, subscripts
w,x,y work fields

supplying you with the Sinclair equivalent.

The program allows you to input both numeric and alphabetic values for the variables associated with LEFT\$, RIGHT\$, and MID\$ in any combination. The line numbering may at first seem peculiar, but in fact serves two purposes:

- It tucks the program into an area of line numbers which are not often used in programs and thus allows you to call on the routine while typing your main program by using the direct command GOTO 9851.

- For those who used my previous Dragon conversion it can be combined with that program by using the Spectrum's MERGE command.

The variables used have been kept to a minimum, Z, Z\$, I, IS, J and JS, and are only used as local input variables. This means that you can use these variables in your main program.

The program may be left as

part of the main program if there is no shortage of memory. It may be worthwhile adding line 9850 STOP as a precaution against the utility program becoming used in the main program.

If it is essential to remove lines 9851 to 9907 then an easy way to do it is to SAVE the conversion program, then prepare a dummy program consisting of the line numbers 9851 to 9907 each followed by a REM statement; SAVE this on the same tape and following the conversion program.

When you wish to remove the conversion program MERGE the dummy program which will overwrite the existing program. Enter LIST 9851 and push the BREAK key. Now, keeping the CAPS/SHIFT key depressed, press keys 1, 8, 0, ENTER in sequence and repeat until all lines have been removed. This way you do not have to think about which line number to enter next.

The program is, of course, specific to the Spectrum, but for those owners of other makes of computer who may wish to use the idea to operate in reverse the following information may be useful:

Sinclair Basic Microsoft Basic
X\$(1 TO A)
OR
X\$(TO A) LEFT\$(X\$,A)
X\$(A TO B) MID\$(X\$,A,((B + 1) - A))
X\$(A TO) RIGHT\$(X\$,((LEN X\$ + 1) - A))

Accounts by Geoff Griffiths

My program will sort out your money for you. It will handle bank and investment accounts or particular categories of income and expenditure. And it can cater for up to nine accounts, each holding up to 50 transactions.

Up to nine monthly transactions — like standing orders — can be dealt with per account.

You enter a date of the

previous run and any regular transactions within the intervening period are automatically added to the database.

The SAVE facility caters for a cycle of three tapes (numbered 1-3) to safeguard against loss of data.

Here's a full list of all the facilities:

- Enquire on all accounts. Gives the current balance for each account and the total of all accounts
- Add an account. Consists of account name, up to 15 characters
- Delete an account
- Add a regular transaction for an account. Consists of day of the month (01-31), comment (up to 10 characters), amount (up to £99,999.99) and whether

- How it works**
- 10-120 title sequence and instructions
 - 150-270 initialisation routines
 - 300-940 main loop, including:
 - 345-410 aiming circle routine
 - 460-580 random variant routine
 - 590-610 dart printing routine
 - 700-868 score calculation for each dart
 - 869-930 score display routines
 - 950 beep routine for 180!
 - 960-1030 test for finishing double, and change players
 - 1050-1105 end-display sequence
 - 1100-1240 main board graphic routines
 - 1500-1600 user graphics routine and data

the transaction of a debit or credit

- Delete a regular transaction for an account
- Enquire on all regular transactions for an account.

- Variables**
- x,y co-ordinates of moveable pixel in aiming circle
 - X,Y co-ordinates of dart on main board
 - v random variant
 - A angle (in radians) of dart, relative to X-axis and centre of main board
 - D distance of dart from centre of main board
 - s score achieved by each dart (s1, s2, s3 are scores for each individual dart in set of three)
 - T(P) total of player P (1 or 2)

Gives details of all regular transactions which currently apply

- Add a transaction. Consists of reference (up to six characters, e.g. cheque number), comment (up to 15 characters, e.g. name of payee), amount (up to £99,999.99) and whether the transaction is a

How Super Darts will look on your screen

Super Darts is available on cassette for £3.50, including postage and packing. Send a cheque or postal order, made out in the name of M. Stanger, to Super Darts, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Your cassette will arrive within 28 days. This offer expires six weeks from the date of this issue of Home Computing Weekly.

SOFTWARE REVIEWS

The Crypt 48K Spectrum £4.95

Carnell, North Weylands Ind. Est., Molesey Rd, Hersham, Surrey KT12 3PL

You must defeat Satan by finding a sacred crucifix, hidden in one of the many crypts.

Each contains obstacles, a monster, and a chest which may help you. Your's and the monster's strength is given as well as your food and gold levels. It's best to avoid the monsters but you can fight if you are carrying a sword.

Keys are well chosen but the keyboard reading is very imprecise and the movement slow. On moving into a different crypt a blood cell attack is sometimes reported which

requires quick reactions. To escape death in Frankenstein's crypt you must press a seemingly irrelevant key.

There are six levels, accessed by a password which you are only told after completing the previous level. You are told the first. There is a good range of monsters but no apparent difference in character.

The locations appear to be totally random — if you return to a crypt you will find a different monster and a changed layout of obstacles.

I didn't find this inspiring. It poses a limited challenge as an adventure and is too slow for an arcade game. S.E.

Now get out of these

...Our reviewers managed to return with their ratings of new strategy and adventure games

Pacific War 48K Spectrum £6

CCS, 14 Langton Way, London SE3 7TL

You control the American forces in the Battle of the Eastern Solomons, which took place during August 1942.

The Japanese, commanded by your Spectrum, intend to reinforce their troops on the island of Guadalcanal and you must destroy the Japanese task forces.

There are nine skill levels, and you can select the starting points of your task forces. On the map only your ships and aircraft are shown, so you must despatch search aircraft to find the enemy positions.

You can send out air strike

forces by selecting the appropriate aircraft and their target position, remembering the ships may have moved by the time your aircraft reaches them.

You are also able to assign some of your fighters to Combat Air Patrol to help defend your ships. However, you are limited to three air missions per carrier.

After each game turn the status of each task force is displayed and the score given.

An absorbing game, but I would have preferred more information on strategy and tactics. S.E.

Classic Adventure 48K Spectrum £6.95

Melbourne House, 131 Trafalgar Rd, London SE10

This really is what it suggests, the classic Dungeons and Dragons type text-only adventure. And as such it's superb! No manual with this. The barest instructions leave you lots to explore.

You find yourself outside a building. After much wandering, you may eventually find the entrance to the underground maze of caverns, and it's huge! I say may, because part of the enjoyment of a decent adventure is trying to work out the rules and how to move around. Much pleasure is gained from trying to outwit the programmer.

There are dragons, trolls, dwarves, all unfriendly, and you can collect diamonds, golden eggs, nuggets and so on. You will find various objects to help, but I never met a friendly creature yet. One of the delights is the cruel humour. Once you reach the cavern called Witts End, you're really in trouble, and should you type in a naughty word out of frustration, the result is entertaining to say the least.

Every Spectrum owner should have this. It's excellent, but be warned, it's also very addictive. Previously published as Adventure I by Abersoft at £9.95 D.M.

War 70 48K Spectrum £6

CCS, 14 Langton Way, London SE3 7TL

A two-player war game set in the mid-18th century. The aim is to capture your opponent's capital by occupying it for three days. For each day you have the option of regrouping any of your nine armies and you can move up to four groups of armies.

When opposing forces meet play switches to a map of the battlefield — each of the 32 locations has a different map.

Each player then sets the destination co-ordinates of each unit. If a unit is within close range of the enemy you may fire. The unit will return fire and casualties calculated. If two units

meet hand-to-hand fighting takes place.

Artillery can fire over a long distance, but it is difficult to judge angles and range. A unit is defeated when it is less than a third full strength or it has failed two morale tests, depending on casualties, officers and a random factor. When all of an army's units have been defeated the battle ends and play returns to the main map.

An interesting game that takes too long — and you must find an opponent. S.E.

Pirate Adventure 32K BBC

Adventure International, 119 John Bright St, Birmingham B1 1BE

An original Scott Adams adventure. I couldn't help noticing a few Americanisms in the output. But, it is yet another good adventure.

There aren't too many instructions and I suspect this is to make the game the more interesting. You use two-word commands and N,S,W etc. to move.

The game starts in a building. After collecting the very important book and safety sneakers you transport yourself to Pirate Island where you need to build a boat to cross to Treasure Island.

This stage is very difficult and needs a lot of thought. Some things seem so obvious they can't be true but you must try every approach.

It's disappointing there are no graphics. However, this would limit the large vocabulary. Even so, I have spent ages trying to explain what I want to do.

The cassette presentation is of a good standard and at least the words are different colours to distinguish commands from the answers and information from objects during the actual game. Anyone could spend ages playing this game. If you can master it, other, later adventures are harder. D.B.

Glug-Glug 48K Spectrum £5.95

CRL, 9 Kings Yard, Carpenters Row, London

This is a beauty! You are a fearless deep sea diver recovering sunken treasure. The snag is that the treasure is guarded by a succession of nasty sea creatures. The better you do, the nastier the mixture gets! There are 32 different screens, which should keep you quiet for a while.

The basic layout shows a boat on the surface and the diver below, connected by lifeline. Protected by his quick-firing dart gun, he can be controlled from either keyboard or Protek/Kempston joystick to collect the treasure. Diver and beasties scroll around smoothly with unpleasant, but nicely

represented, things happening when fighting fish, giant squids and octopus get to you. Beware the crabs, which are impenetrable, and the hunter sharks which go for the lifeline. All in all, super graphics, but the sound, though good quality, is a bit sparse.

The nice feature is that anyone can succeed to some extent; points are gained by shooting assailants. If you want to reach the next level however, you must collect the treasure. The result of this well judged level of difficulty is that there's something here for everyone, young or old, expert or beginner. Recommended. **D.M.**

Monsters in all shapes and sizes

You'll find all manner of beasties in this selection of new Spectrum games, star-rated by our team

Dr Franky and the Monster 48K Spectrum £5.95

Virgin, 61/63 Portobello Rd, London W11 3DD

You control Dr Franky who must turn his monstrous creation into a human being by collecting flasks of life-giving chemicals placed in his dungeons. Unfortunately, the people he used to make the monster have turned into ghosts and are desperate for revenge.

You must jump up the holes on each platform to reach the flask, which you must then take to the dormant monster on the far side.

Be quick or else the ghosts trap you and collision means death. You must also avoid the layer of

bricks that move down the gap in the centre of the screen and the truck which crosses the top platform.

There also appears to be a time limit because Dr Franky appears to die for no other apparent reason if you wait around too long. Controls are simple but response can be slow at times which makes Dr Franky difficult to control. There are nine different dungeons and a magic hammer will help you on some.

The main drawback is that this game is fiendishly difficult to play. There are too many ghosts for my liking and they are far too intelligent! **S.E.**

Ed On Spectrum £5

CCI, Units 2, 3 and 4, Shire Hill Industrial Estate, Saffron Walden, Essex CB11 3AQ

I didn't think it would take long before someone produced a souped-up machine code version of this old favourite of the magazine listings.

You play a racing car trapped within a maze. Your job is to collect all the dots — don't ask me why — while avoiding the computer controlled car. Your only defence against collision is to change lanes at the last possible second, since the computer follows you closely. You also have full speed control, which is very important in trying to outwit the computer's car which only travels at one speed. It sounds deceptively simple.

In fact I have only managed to clear the first screen once, after which there are no less than two of the turbo-charged terrors to contend with. A nice touch are flags which can be picked up for bonus points, but these tend to keep the mind from the task in question: avoiding the computer's car.

Sound and graphics are nothing to write home about, but comprehensive instructions are supplied and the game is fun. It does my ego good to beat the computer at something, and this game ensures this doesn't happen very often. **T.B.**

value for money	50%

Doomsday Castle 48K Spectrum £6.50

Fantasy, Fauconberg Lodge, 27A St George's Rd, Cheltenham Glos GL50 3DT

The scenario is a little odd because you are exploring a fantasy castle using something like a space capsule. This slightly spoils the usual illusion, but not much because this is an excellent attempt to turn an adventure into an arcade-style game.

You must explore the castle in your capsule, seeking to restore the six lost elven stones. The castle consists of 25 main chambers connected by 49 corridors. Each is infested with monsters with quaint and frightening names like Urks,

Googly birds and Garthrogs. Each has its own pattern of behaviour and the result is a linked arcade game of 74 screens in which the player has some choice over which screen he or she will play, providing the castle has already been explored. This, of course, is not easy.

Graphics are excellent. The game is compulsive, varied, entertaining, well balanced, well designed and has a pause feature for when things become too much. I particularly like (= hate) the way the Googly bird will suddenly wake and send deadly thread bouncing around. Highly recommended. **N.W.**

instructions	90%
playability	95%

value for money	90%

Bimbo Spectrum £5.45

Joe the Lion, 157 Market St, Hyde, Cheshire SK14 1HG

Strange game this — cross between Watership Down and Tranz-Am! A moving maze scrolls in all directions as you control Bimbo the Rabbit. You have to get Bimbo to eat carrots, drop apples to distract pursuing black rabbits and avoid holes. Extra points are gained by eating clover. Your radar (Radar? For rabbits? Ah well.) shows the location of carrots, Bimbo and the black turbos... sorry, rabbits. Eat all 10 carrots on each level to reach the next, but when you do, more black rabbits appear. The more you chase about, the more

your energy level drops and the more carrots you need to eat. Every fourth level, there are no pursuers, just a race against time to get the fuel... sorry, carrots.

Graphics are quite well done, though distinctly 2D. And boy, is this game fast! The inlay card says 100,000 is good, 250,000 brilliant. I couldn't even raise 1,000! There ought to be variable difficulty levels.

Although professionally produced, with good presentation, the concept just isn't original or addictive enough. It hasn't been done with rabbits before but... **D.M.**

ADMAN ELECTRONICS

Vic 20 computers have been talking back to their owners for quite some time. Now, Commodore 64 users can have that same pleasure too—by getting an ADMAN SPEECH SYNTHESISER! It's word power is endless as there is no set vocabulary. Yet operation is simple. The 64 elements of English speech are pre-programmed to let you put your words together as soon as you switch on. Just imagine....you'll be able to program your own adventure games with characters that can actually talk. Many leading software houses are now developing programs that are compatible with the Adman 64 Speech Synthesiser.

First releases are:

Twin Kingdom Valley (Bug-Byte) Attack—Attack (Voyager) 3D Silicon Fish (Thor Computer Software)

For Vic 20 users there are also 8k and 16k RAM PACKS and a 3 PORT EXPANSION MOTHERBOARD.

Prices around:

8k Ram Pack £29.95
 16k Ram Pack £39.95
 Motherboard £19.95
 Speech Synthesiser . . £49.95

Adman computer accessories are available from all good computer shops. For further information, why not take a lead from our speech synthesiser.....ask for it! See you local dealer or simply post the coupon.

COODENATIE
 MAT is mankind's last hope. The desperate plan to place in the mind of a teenager the combined tactical skills of all the planetary leaders in the solar system. Now your mind is MAT's mind. Take control of the USS Centurion Battle Cruiser and Tactical Command Centre to control the planetary defence fleet against the Myron attacks in MISSION: ALIEN TERMINATION.

NORMAL PRICE £5.95
 OUR PRICE £5.00

PCW REVIEW, 29/3/84. ...worth the wait... possibly even better than the original! Different elements include the much wider variety of screen layouts, the chance to go through rooms in more or less any order and special obstacles like swinging ropes. It's technically brilliant, funny, and of course, completely addictive. Work halted for several hours when it arrived in the office.

PCW REVIEW, 15/3/84. ...one of the best Spectrum games I've seen this year... a cross between Timegate, Star Raiders and Star Trek, but with dozens of extra features and 3D sprite graphics...other features include warp drive and 3D logic i.e. everything moves on the scanners according to true spacial logic...amazing graphics...In terms of current pricing policies for Spectrum programs its worth twice its price.

Moon Lander by Yarko Blahy

Use your skill and judgement to land your spacecraft on the moon's surface.

But don't descend any faster than 20mph or the consequences will be serious. This game needs a joystick.

• We always inserts REMs in Commodore listings as an aid to recognising the control characters as you type in the programs. These REMs should not be entered.

Sound Effects by M. Serbert

Here are a few sound effects I use in my hobby, writing adventure games. I would like to see what other readers could produce.

Lines 1 to 5 set up the sound variables and 10 to 100 print the selection menu.

Each sound is then generated in a separate subroutine so they can be used individually.

The menu numbers correspond with the routines, so sound No. 1 starts at line 1000.

The subroutine at line 10000 simply clears all the sound registers and this is called at the start of every sound to be generated.

The routines are straightforward, short loops and mainly voice 1. The sounds are generated by POKEing values into the variables.

Variables

- Wf** waveform
- Hf** high frequency voice 1
- Lf** low frequency voice 1
- H3** high frequency voice 3
- L3** low frequency voice 3
- VO** volume control
- AD** attack and decay voice 1
- SR** sustain and release voice 1

Test your ...and you can

Play our Moon Lander game and then try out a few sound effects

Armchair Thriller!

THE ULTIMATE SECRET?

WHEN you have endured the burning farmhouse and discovered a strange diary, avoided the football hooligans, met the shady lady, Japanese tourists, the pop star and the busker; avoided the gunmen, Eddy the crook and Scarface; visited the waxworks, the natural history museum and the arcade; worked in the street market, the agency or the cafe; travelled through France, Germany, Italy, Turkey and Israel, experiencing Abduls maze, the labyrinth and meeting a handful of very strange people on the way...

ONLY THEN can you be deemed worthy of discovering the ultimate secret.

PETTIGREWS DIARY is available for only £7.95 from **BOOTS** and all major stockists or by sending a cheque/PO to us at:

SHARDS SOFTWARE, 189 ETON ROAD,
ILFORD, ESSEX. IG1 2UQ.
(Access/Barclaycard orders phone 01-514 4871)

ALTERNATIVELY you can play **PETTIGREWS DIARY** on your Dragon, BBC B or Electron, and learn the secret from the safety of your own armchair. **BUT DON'T JUST LISTEN TO US!** "Pride of place in this supplement for the most original and entertaining adventure... it's got to be value for money" *Computer & Video Games* adventure supplement. "The best adventure game for the Dragon on the market that I've seen" *Personal Computer News*. "I have nothing but praise for this unorthodox adventure" *Micro Adventurer*. "If you like puzzles and mysteries you'll like this package" *Computer Choice*.

**A SHOW FOR ALL THE FAMILY,
DESIGNED FOR THEM AND THEIR MICROS**

How to turn a BBC Micro into 14 lab technicians. For only £325.

As if the BBC Micro weren't already famous for its versatility, we've now taken it a step further.

14 ways to control science.

With the simple, and remarkably inexpensive addition of the Acorn IEEE Interface, the BBC Micro can control, manage and exchange data with up to 14 separate devices compatible with the IEEE 488 standard.

Which means you get the speed, accuracy and repeatability of computer-controlled operations at a fraction of the price of other systems. And without sacrificing the IEEE 488 standard.

The possibilities are limitless. The peripherals can range from a simple printer or a digital voltmeter to oscilloscopes, logic analysers, spectrum analysers, function generators, frequency meters - even a complete configuration of multiple controllers and complex equipment.

The Interface is familiar.

A Read Only Memory plugs into one of the Micro's spare ROM slots, providing the Interface Filing System, a set of commands in plain English, and in the straightforward format already familiar to those who know the Micro. (Commands can be incorporated in any language available on the BBC Micro, including the popular BBC Basic.)

More facilities.

But the BBC Micro/IEEE Interface combination gives you more than just control.

Thanks to its renowned graphics capabilities, it provides the ideal way to present experimental results in

an instantly understandable form. A second processor can be connected for even faster processing and greater memory capacity. Or the Micro can be linked into Acorn's Econet local area network.

And even more.

And with its additional 1 MHz Bus connection, the Interface can even be linked to other interfaces, including Acorn's Teletext adaptor.

Finally, because the Interface operates independently, the BBC Micro is free to perform all its other functions as well.

So you can take advantage of the ready-made programs covering education and business subjects. You can use it as a word processor. Add a disc drive. And that's only the beginning.

How to get yours.

The IEEE Interface costs just £325, matches the BBC Micro in colour and profile, and comes complete with integral power supply and file server ROM.

If you're a credit card holder, you can order the IEEE by ringing 01-200 0200 anytime.

Or 0933 79300 during office hours.

(By ringing the same number, you can get the address of your nearest stockist, or full details of the BBC Microcomputer system if you don't already have one.)

Alternatively, you can order the package by sending the order form below to: Acorn Computers, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please allow 28 days for delivery.

Credit card holders, telephone 01-200 0200 anytime, or 0933 79300 office hours.

Technical Specifications.

PCB carrying IEEE 488 bus interface circuitry, using TMS 9914 integrated circuit.

Internal power supply.

Height 70mm. Depth 350mm. Width 210mm. Weight 2.1kg.

Colour: BBC Computer cream.

Construction: Moulded top and bottom to match BBC Computer profile. ABS injection moulded plastic.

Power in: 240v, 50Hz, 3w.

Operating Temperature: 10° to 35°C.

Designed and manufactured to comply with BS415 Class 1 standard.

To: Acorn Computers, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me _____ Acorn IEEE Interfaces at £325 each, incl. VAT and delivery. I enclose PO/cheque payable to Acorn Computers Limited Readers A/C or charge my credit card.

Remember and could win

Type in Derric
game for the
you put m
me

Based on the old card game,
this is really a test of memory.

Fifty cards are displayed face
down and the players take turns
to turn over two cards which are
seen by both players.

The aim is to remember
where the cards are in order to
turn over two cards which are
the same.

There are more instructions
in the program.

How it works

- 50-90 offer instructions, set arrays
- 100-120 identify players
- 130-410 shuffle and deal cards
- 420-680 main game routine
- 690-740 instructions
- 750-830 scoring sub-routine
- 840-940 end routine
- 950-970 warns of incorrect key-press
- 990-1160 DATA as per REMs

Texas: the state of the stars

A mixture of five new games for the computer that won't lie down

Pelmanism £3.95

MarKat, 4 Cloreen Park, Belfast BT9 5BX

An entertaining game for adults and children alike which relies on players being able to remember a set of 32 cards displayed face-down.

Player one starts by selecting one of the cards by pressing A to Z and 0 to 9. The chosen card is then displayed face-up and the player makes another choice. If the two cards match, they are turned over and play passes to the opponent.

Obviously, play becomes easier as play progresses, because the identity of each card is revealed and there are less to remember.

The pictures used on the cards are four characters in size and include houses, trees, flowers, faces and patterns.

Unfortunately, this is for two players only. An option to have four or five competing would be nice, as would an option to compete against the computer. This would obviously have to rely on a rather unsatisfactory random method, determining whether or not the computer memorised the cards correctly.

Hangmog £3.20

SoftI, 14 Station Rd, Brough, North Humberside

A clever and original idea based on Hangman. The prisoner on the gallows is replaced with a rather unfortunate cat which has strayed into the meat works and is caught on a conveyor belt leading to a mincer.

Your job is to guess a word and save moggy.

The alphabet is displayed at the top with a conveyor belt underneath, onto which the letters fall once chosen.

Depending on whether or not the letter chosen is correct, it falls either down the "best beef" chute or lands on the conveyor belt on which moggy is seated.

When a wrong letter falls onto moggy's conveyor belt it pushes a chunk of meat off the other end and into the mincer. As cats have nine lives, moggy has eight chunks of meat in front of him and on the ninth incorrect guess he runs out of luck and falls down the mincing chute.

Unfortunately, it is possible to press the same letter any number of times, although, if the player is careless enough to press the same letter twice, he deserves to lose a life.

Overall, well-thought and enjoyable.

ASW Tactics 2 £11

DEJ, from Stainless, 10 Alstone Rd, Stockport, Cheshire

After first reading the instructions, full of high powered jargon, I was filled with enthusiasm. However, apart from some original graphic effects and sounds, it fell far short of my expectations.

A U.S. naval officer wrote this and it is a simulation based on his experience as a helicopter pilot.

The screen shows an aerial view of a task force, led by a carrier for the helicopter. You, the 'copter pilot, must safeguard the fleet while searching for an enemy submarine.

To gain information on the

sub's location, the helicopter flies around dropping sonar buoys, using onboard sonar and, if requested, looking for a signal from the surveillance S-3 jet.

Providing a further clue you may request a three-second periscope view of the task force, as seen from the enemy submarine. I failed to believe the accuracy of this when, only having two ships left in the fleet, the periscope still showed three!

After destroying the sub you are greeted by the Stars and Stripes — actually the Squares and Stripes — and a mini firework display. Needs Extended BASIC.

J.W.

instructions	100%
playability	35%
graphics	60%
value for money	45%

Pilot £5.95

Apex, 115 Crescent Drive South, Brighton

A good well-written flight simulator. Screen display is clear and the colours are well contrasted. The display of the terrain map is blocky, but the runway display is good, shown from above as your plane slowly approaches.

The tape loaded first time to give the option of take off, landing or in flight. You are then asked if you require wind effects and the game starts.

In play the program is slow, but gives a reassuring beep when you press any key. There is an audible stall warning, otherwise all is quiet. The instructions

come in a four-page booklet as well as a separate sheet giving loading instructions. The instructions are easy to understand and are clearly set out, like the whole program. The program is easy to use, the slowness being to the players advantage.

Overall, fun and very addictive at the start. Later on, however, the program did become a bit boring, after I had mastered landing. Everything is taken into consideration, such as wind, lift and flap drag.

M.H.

instructions	100%
playability	85%
graphics	80%
value for money	95%

Go for the gold £7

DEJ, from Stainless, 10 Alstone Rd, Stockport, Cheshire

If you've ever fancied searching for the little people's pot of gold then there's plenty here. They're also so easy to obtain that you'll be bored stiff collecting them.

The idea is that you are lost in various forests looking for the gold. The screen shows trees, your man and a pot of gold. Also in the forest are pixies, to help increase your speed, but in pursuit of your man there's a leprechaun. When he catches you a man is lost. The game continues for as long as you have men. With each pot collected its

value increases and you move onto the next forest.

Designed for keyboard or joystick, in the keyboard version it seems a gremlin has joined forces with the little people! by pressing any key other than the arrow keys used in the game your man travels around and off the screen at top speed. With this method of cheating, pots of gold become yours for the taking. At least this provides some amusement in what is otherwise a slow and tedious game. Needs Extended BASIC.

READY FOR THE FLAT SEASON

COURSEWINNER

THE PUNTERS COMPUTER PROGRAM

COURSEWINNER allows you to use the power of your computer to get the edge on the bookmaker. The program contains a database full of detailed information on all English and Scottish flat courses. The ten leading trainers and jockeys, and effect of the draw for different weight carried and race length is detailed for each course. This information can be displayed on the screen for reference at any time.

COURSEWINNER can be used in two modes — quick mode requires only the starting price and results of the last three outings (as found in any newspaper) for each runner. Extended mode allows detailed analysis of the following factors:

- Recent form and starting price
- Trainer and jockey form for the course
- Weight carried and Race length
- Effect of the draw and of the going
- ★ Also included in the package is a utility which calculates the returns on any single or accumulator bet, win or place, tax paid and deducted.

Available for: SPECTRUM (48K), BBC (B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI (48K)
Price £12.50 all inclusive

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

POOLSWINNER is the most sophisticated pools prediction aid ever produced. It comes complete with its own massive database.

Fully menu driven. Simple to use, yet very powerful. Predicts SCOREDRAWS, DRAWS, AWAYS and HOMES. Selec Software guarantee that POOLSWINNER performs significantly better than chance. Your prospects of dividends, and perhaps a jackpot are greatly enhanced.

POOLSWINNER automatically calculates the league tables as the season progresses. The tables for any division can be displayed for reference at any time.

THE DATABASE supplied with the package is the largest available — over 20000 matches (10 years league football). The database automatically updates as results come in, allowing the program to adapt to recent changes in patterns.

POOLSWINNER is for use with English and Scottish league matches, or cup matches between league sides. The program can be used for all future seasons. The package is complete with program, 20000 match database, and detailed instruction booklet.

Available for: SPECTRUM (48K), ZX81 (16K), BBC (B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI (48K)
Price £15.00 all inclusive
 Immediate dispatch (return of post)

Wear your computer screen on your wrist

When you see someone glancing at his wrist in future, don't assume he is checking the time. He could be looking at his computer's screen.

Seiko Instruments, parent company of Epson, has just announced a computer read-out. And it has also launched a pocket computer meant for use with the watch. The computer communicates with the display via low-frequency electromagnetic waves.

At present you have to be in Japan to buy one, but it should not be long before Seiko sends them here.

The display can present up to four lines of 10 characters each and two computers are available. Details are available on one: it uses a processor similar to the Z80 and has 26K of ROM and 4K of RAM, 71 keys and interface potential to other displays and printers.

Not surprisingly, Commodore is expected to hold its position at the top of the league table of home computer makers. Last year it has 37 per cent of market — shipping well over a million computers — and this year's prediction is for 36 per cent.

Atari was second with 16 per cent, expected to improve to 20 per cent this year. Texas, which has now pulled out of the market, was next with 14 per cent.

Then there was Timex (nine per cent) which has stopped selling micros after a lack of success with U.S. versions of the Spectrum and ZX81. Tandy was fifth with eight per cent (prediction: 13 per cent) and then there was everyone else.

Next year Coleco, if it is lucky, will command a whopping six per cent. How's that for some educated guessing? We'll see.

Even though the number of computer retailers doubled last year — and the market this year is expected to rise to \$3.6 billion from £2.4 billion — one of America's largest retailers got out of the business.

J C Penney, which had been selling Atari, Coleco and TI, claimed inadequate profits!

The IBM PCjr. is not going to be a significant factor in the home computer market place since most of them sell for well over \$1,000 and home computers are defined here as costing less than \$1,000.

Atari and Activision have joined together to transmit video game and home computer software over the commercial radio waves.

To take advantage of the system, a user would have to connect a special receiver to the video game machine or computer. The bill would come later.

Not wanting to be left out, Control Video, of Virginia, is doing the same thing but via phone lines and modems. Coleco and American Telephone and Telegraph have also announced a similar system using the phone lines.

Playcable, a cable TV company, has been offering games for the Intellivision system for about three years now. Unfortunately, it is about to be left high and dry as Mattel is likely to pull out of the video game business at any time.

That's all for this time. See you next week.

Bud Izen
 Fairfield, California

Make your micro work for you

These could make more use of your computer. Read what our reviewers think of them

My Secret File 48K Spectrum £9.95

Mosaic, from John Wiley & Sons, Baffins Lane, Chichester, Sussex PO19 1UD

This started as a Puffin paperback, and is best described as a diary for lazy or unimaginative youngsters up to 10. At that, I may be maligning 10-year-olds.

Example pages: MY CLOTHES. Sub-headings: Favourite outfit for lounging around... three things I most hate wearing... clothes I'd really like would be... MUM AS I SEE HER: looks her best when... nags me most about... can get round her by... PARTY RATINGS: whose party... what kind... rating...

The author details all possible events and conditions, reducing your whole life to a series of ticks, crosses and the occasional word or underline. Some might give parents unease: "The greatest number of one inch or more shreds, after unpicking a Shredded Wheat".

The computer version loses the cartoons, non-humorous, of the book but allows SAVEing as a datafile, useable yearly, and your very own secret access code. Pages are accessed by content menu and you type one-word answers to "People gasp with shock when they see my..." The mind reels!

Crystal 32K BBC £3.45

Scientific, Old Loom House, Back Church La, London E1 1LS

It's not often you find BBC software at £3.45 so I wasn't sure what to expect. The wrapping is a bit plain, with few instructions.

Crystal is not a game! It is designed to foretell the future in the style of Nostradamus. The author describes it as radically different. I agree.

One is first confronted with another set of instructions. This still did not create a full image of the program in my mind. I was invited to press any key and unknowingly I conformed. It definitely was original. Line after line of morbid prophecies passed

before me. These are organised into 10 decades with 10 prophecies for each year in the form of four-liners, or quatrains.

The mode 7 display contains no graphics and sound is non-existent. The predictions, which to the unaccustomed eye might seem fairly useless, may in fact hold a great and deep philosophical meaning to those of us who can understand the complex forms of Nostradamus.

The meanings are often beyond me. However, if you wish to gaze into the crystal ball you should know it is only available by mail.

D.B.

Broadway Boogie and Classics 32K BBC £4.95

Broadway Electronics, 1 The Broadway, Bedford

The cassette box is boring and there are no instructions. But, don't go away — it's not all bad. In fact, this is an interesting little package: three pieces of music, all written in BASIC.

We start with The Broadway Boogie. It's got drums, bass, piano and a trumpet. It really uses the BBC's sound capabilities. All is well until we reach the finale. For a moment or two the piano is out of time.

I said there were no instructions. In fact it tells you to type CHAIN "The name of the song". However this is useless

because they are written in the wrong order. CHAIN"" is the best idea.

Next is the G-string, which includes graphics. It needs them. It's very repetitive and sounds just like the Castella advert. I think that's why a smoking cigarette is shown. In this program you can choose the key. Prelude is more classical. A nice piano piece, it is far more interesting.

At £4.95 the cassette is fairly expensive but I feel it is worth it for the change from space games.

D.B.

First Aid 48K Spectrum £4.60

Eastmead Computer Systems, Eastmead House, Lyon Way, Camberley, Surrey.

Sadly, this is a program in search of a purpose. It purports to be a source of advice when first aid is needed, not a "learn about first aid" program. But by the time the program has loaded, your patient could be dead!

Eastmead has indulged in an orgy of SCREENs to be loaded, with logo, series logo, and finally program name. This takes 3f minutes! And you haven't loaded the program yet. When you have, there's an index then four blocks of code on different parts of the cassette. When you eventually reach what you want,

there is little in the way of practical help. It merely helps you decide whether to call a doctor.

As a program, therefore, it's poor. More seriously, it starts with a disclaimer for errors and omissions, telling you not to proceed unless you accept it. This is not, however, on the inlay card. So you could have a program which you can't accept, but which you've paid for. It ought to be rectified. But frankly I wouldn't recommend you to buy this.

SOFTWARE REVIEWS

The Night Sky 32K BBC £9.90

Bridge Software, 36 Fernwood,
Marple Bridge, Stockport SK6
5BE

This is meant for those who have a previous interest in astronomy and for those who might be interested if they knew more. The core is a display which can show the stars visible anywhere on earth on any day between 1975 and 2000, at any time and looking in any particular direction. The display is very easy on the eye despite being in only two colours. The brightness of each star is represented by four sizes of dots and you are able to select each constellation using its International Astronomical Union abbreviation.

The facilities you are given to

control the display allow you to use this program for learning too. The manual, simple but comprehensive, suggests you choose the ANY option which means it will search its memory for a visible constellation and display it for you to learn or guess.

One of the greatest uses for those already knowledgeable in the area will be to pretend they are in a different location and then sample its stellar offerings. The only criticism I have is that when you set up a data it can't tell you if it's cloudy! **D.C.**

Maths Orbiter 32K BBC £6.90

Elm Computers, 59 Bateman Rd,
East Leake, Loughborough
LE12 6NN

The only way to describe this is as an arithmetic text book with pictures, sound and automatic marking. That is really all there is to say. If you feel your child needs practice in one or all of the four rules of number then this may be for you! I think maths has much more to offer than this and that programs like this can do much more harm than good.

The purpose of your answers is to countdown, launch, orbit and land your spacecraft. The graphics are fair but not remarkable. The on-screen prompts are all in capitals which makes them

difficult for younger children despite the good use of double height characters in parts. If you are unfortunate enough to get a problem wrong the correct answer is flashed on the screen for far too short a time. This means it is difficult to learn from mistakes. The levels are difficult to control, you cannot specify maximum numbers, simply an arbitrary level number, and there is no facility for negative or decimal numbers. A very disappointing program of very limited use. **D.C.**

Address Manager — Plus 80 48K Spectrum £19.95

OCP, PO Box 99, Oxford

A very rapid machine code program for storing up to 400 full names, addresses, post codes and phone numbers, and retrieving them to order. OCP has 42 characters per line onto the screen instead of 32, and entries and alterations are made by moving the cursor to the required point, then typing. Your input appears in the right place, instead of the bottom two lines.

Though not set up for Microdrives, the program can load and save files of data to

order from the menu. An additional, and very useful feature, is that each name can have up to three identifying codes attached and the address list sorted by these attributes.

The output is where the Plus 80 comes in. This will drive a Centronics printer through the Kempston interface to produce full 80 columns and thus double width, double height and alternative type faces, onto plain paper, labels and so on. It won't however, drive the ZX Printer, you need the £9.95 version for that. **D.M.**

Software to use and to learn

A mixed bag of utilities and educational programs examined by our experts

Animated Alphabet Dragon 32 £4.95

Dungeon Software, Milton
House, St John St, Ashbourne,
Derbys

Designed for the early reader, this is a graphical introduction to the alphabet. One is first given the choice of watching the whole display or pressing a key for each picture. Each letter is shown in capital form with an example word beginning with that letter and a picture corresponding to the word, all in high resolution graphics. Each display either has a musical piece of some action. Particularly good ones were hammer, drum, queen and zip. Graphics are clear and

interesting, sound well-used and overall a well-written program. But there are some detractors. This program helps to reinforce letter recognition but is it really versatile enough to be of value? There are no options or changes in action as the alphabet is run through. A collection of words displayed graphically allowing some form of interaction after the alphabet may have been a good idea perhaps. But the program certainly needs some additional stimulus to make it more worthwhile in the long term. **C.G.**

Keydefine 48K Spectrum £4.95

Scientific Software, 37
Cottesmore Rd, Hessle, North
Humberside

A very impressive tool kit for those who write programs. It's complete with printed instructions covering three sides of A4, and menus for the main program, Microdrive routine and the mini-keydefine enclosed in polythene wallet.

It autoruns to show basic instructions leading to the menu, followed by memory allocation of the routines and a menu of options. Twenty three keys are said to be pre-defined with 12 keys available for redefining — but there appears to be 16 pre-defined for programmers and

eight for use. Holding down the space bar, pressing required key and releasing both produces the routine as a direct command which can be edited or executed with the enter key.

Some of the most valuable are: **A** turn Auto line number on/off; **L** line number trace on/off; **R** renumber BASIC program; **K** hex to decimal conversion; **I** decimal to hex; **H** crosshatch screen. A block delete routine is missing, but a key can be redefined and added to the menu. **T.W.**

Remember Andrew Gardner's
three programs in HCW 54?
Here's two more from him to
test your driving skill and your
knowledge of words

Oric Rally

Keep your car on the road for as long as possible — it's not as easy as you might think.

At the start you choose a skill level which controls how much the road twists. On the higher levels you're allowed to stray onto the grass verge to give you more of a chance!

You are given a 3D view of the road and further ahead there is a blanket of fog. You'll also be given a random day or night scene.

Hint: As in real life, moving the car left seems to move the road right.

How it works
30 selects low-resolution graphics, switches off key-click/cursor
40-90 the whole game is a series of sub-routines
1000-1280 set up the large number of user-defined graphics
2000-2050 select skill level
2060-2200 set up main variables
3000-3310 PLOT fog area, road and driver's cockpit, PLOT all screen colours
4020-4090 make random and automatic adjustments to road
4100-4125 read keyboard, check for crash
4140-4420 check road is still within screen limits
4510-4550 change position of road according to keypress
5000-5120 crash, PRINT score, wait for key

Variables
TR(W) array holding position of each part of the road
AS-ES hold road segments to be PLOTted
FS holds background to road
PS(W) holds fog graphics
K/M move road on key-press/random movements
P/KS keyboard values
SL skill level
S% current score
H% high score

Hints on conversion
CHRS statements can be removed
CLS clears the screen
PAPER/INK set background/foreground colours
PLOT x,y is equivalent to PRINT AT. Places string given at position x (0-38), y (0-26). PLOTting a number acts as a colour attribute.
WAIT n creates a pause for n milliseconds
SPC can be replaced by TAB or removed
PEEK (520)/KEYS reads the keyboard
EXPLODE, PING are sound commands and can be removed or replaced

Wordman

This game will pick a word from a list of 290 and you must guess it before running out of lives.

At the start the number of letters is indicated by full stops. You can enter a single letter or a whole word.

If the letter is correct it will be placed in its correct position/s in the line of full stops.

If wrong, it will be added to a list to remind you what you have already entered. The game will finish if you have made 10 incorrect guesses.

How it works
60-100 set up variables
500-570 choose word, set up guess string variables with appropriate number of full stops
1000-1130 PRINT screen, wait for next guess
2000-2090 check if word has been guessed, update variables controlling screen set up, check if all lives are lost
3000-3050 check if letter guessed is in word, if it is add it to guess string
4000-4090 failure routine
5000-4090 word guessed routine
6000-6580 DATA for 290 words

Variables
GS guess string to show progress
GIS remaining lives
LIS guessed letters
WS word to be guessed
IS your guess
GI%, LI%, G% used in SPC command when PRINTing the screen
W% length of word to be guessed

Hints on conversion
POKE 618,10 and the screen POKEs can be removed
PLAY is a sound command and can be replaced or removed
 When converting to other computers, the word guessed routine would have to be replaced by a display of your own design.
 ● See also Hints on conversion for Oric Rally

If the word you enter is correct or if you have completed the word by entering the last letter you will be congratulated and game will re-start.

The screen will also display your remaining lives.

SOFTWARE APPLICATIONS

SUPER BREAKER

For the Commodore 64, this utility will back-up most popular cassette programs onto tape or disk. Supplied on cassette with full instructions. For fast turn round of orders, by First Class Post, Rush £4.99 to:-

CLARK KENT SOFTWARE
26 Northcape Walk, CORBY
Northants NN18 9DQ

STOP PRESS. Tape to disk utility. Transfer your cassette based software onto disk. Send £4.99

TAPE COPIER 5 (new version)

Makes BACK-UP COPIES ALL types of SPECTRUM programs (incl. headerless, m/c unstoppable) easily with MANY unique features. **FULL MONEY BACK GUARANTEE** if you are not satisfied.

★ M/DRIVE copies Basic/mc/arrays on the microdrive STOPS programs to help the run.
★ LOADS in all program parts CONTINUOUSLY — even without pressing a key. Other copiers require many loadings — MASSIVELY saving you time and trouble!

★ MAXBYTES copies programs occupying the FULL 16K or 48K! Verifies. Repeat copies. Auto. Abort. HEAD data.

★ Full instructions, very user friendly. BREAK at any time (just save a header!), then carry on LOAD. Copies all programs that we are aware of.

Cost only £4.49 or £5.50 with M/DRIVE. (Overseas: + £1 Europe, £2 others).

5 STARS FROM THE HCW REVIEW, WITH THREE 100% RATINGS!

IERM (DHC),
16 Stonepit Drive, Cottingham,
Mkt Harborough, Leics

SPECTRUM KOPYKAT IMPROVED PERFORMANCE

Simply the best. Copying any program is now as easy as LOADING and SAVEing your own programs. Any ZX Spectrum program can be backed-up onto a fresh tape. Even programs that cannot be stopped can now be copied. 100 per cent machine code. Prints file names. Copies headerless files. SPECTRUM KOPYKAT uses no program area so full size programs over 41.7K (9K for 16K machines) can be copied. PLUS FREE Header Reader program.

Despatched by first class return of post.

Send cheque/PO for £4.95 to:

MEDSOFT

(We take Access and Barclaycard)

Tonight you could be lost in a world of a thousand mirrors WILL012

COMMUNITY CHEST ▲
Pit your wits against the computer with this exciting new graphics version of the family board game.
16K ZX81 £4.95

ST ANDREWS ▲
One of the best golf games yet devised! Play all eighteen holes at St Andrews, the home of golf.
Spectrum 48K £5.95

JIGSAW ▲
The program with the ultimate in graphics. Spend hours compiling detailed pictures from the jigsaw pieces that the computer shuffles for you.
Spectrum 48K £5.95

SNOOKER ▲
Pot black or play high breaks without even leaving your living room! Lots of fun with a full display of the table on-screen and automatic scoring by the computer.
Spectrum 16K/48K £5.95

REFLECTIONS ▲
A frustrating, mind-boggling game that'll keep you at the keyboard for hours on end. You control a torch-beam that you must flash into an unknown grid of mirrors. The tricky bit is to locate the mirror and its angle from the reflection.
Spectrum 16K/48K £5.95

REVERSI ▲
Hours of stimulating companionship for any player. Four levels of play from beginner to expert. The board is displayed on the screen, and the program provides many other features, including the facility to store a half-finished game for completion later on.
16K ZX81 £5.95
Spectrum 16K/48K £5.95

CONNECT 4 ▲
Lots of fun with counters as you pit your wits against the computer or a friend. Full graphics display.
VIC-20 £5.95

*Come on!
it'll take the best of you
to crack these two winners!*

*Bouncing
bounders!...*

... fasten your safety belt and screw down your screen because you'll be jumping for your life with **POGO**, this fantastic, on the hop, all action fun-game from Ocean. Just bouncing around colouring steps may sound like child's play but only the toughest will jump at the **Pogo** challenge, and when the going gets tough the tough get going! Just you try to pogo up and down the stairs dodging all kinds of meanies and you'll get a taste of the real **Pogo** action. So rush right now to your local software shop and bounce out with this fun-packed winner... **Pogo** will have you jumping for joy... hopping mad... stair crazy... aaagh!!

POGO
Spectrum 48K
5.90

*Spinning
dizzy!...*

... yes, spinning dizzy is just what you'll be if you try playing **Chinese Juggler** using only your keyboard. After a spin with the 'juggler' you'll believe that your computer and joystick were made just for playing this incredible version of the classic art. **Chinese Juggler** is a classic in its own right, you can almost feel the plates spinning on your joystick! It will take the deftest of touches and lightning reflexes from the best of you games masters to master the **Chinese Juggler**. The superb cartoon animation, delightful stage design and ingenious originality all add up to putting **Chinese Juggler** in a class of its own. Take the chance now to own what could well become a collector's piece and enjoy the fun and finesse of **Chinese Juggler**, one of the most truly remarkable games in the software market.
